

MANAGED WORKPLACE OFFICE 365™ SERVICE MODULE

Monitoring & management of multiple Office 365 sites from a single console

The Managed Workplace Service Module for Microsoft Office 365 provides monitoring and management for Office 365, right from the Managed Workplace Service Center.

One dashboard

From a single dashboard, manage Office 365 usage across all your customer sites or focus by site or by user.

Simplify Management

Simplify Office 365 administration by reaching common tasks in a single click. No more logging out/logging in to manage multiple customers.

Stay in control

Easily view information on subscriptions, licenses and usage. Set alerts for license expiry, mailbox usage and top traffic.

Maintenance and troubleshooting

Quickly reset passwords on any site from a single dashboard. Single click maintenance that would have otherwise required PowerShell® scripting experience. Alerts can be configured to integrate with ticketing systems to track maintenance.
