|------|---|
| *New | Log support has been added since the last public software release. Contact WebSpy Support to obtain the latest loader file. |
| *Mod | Log support has been modified since the last public software release. Contact WebSpy Support to obtain the latest loader file. |
| 1 | Format includes support for more than one protocol. Analyzer Standard will not import mail data. |
| 2 | Extra configuration of your SQL server database is required. Click here to download the white paper. |
| 3 | Realtime monitoring of Astaro log files is only available via the Syslog function. |
| 4 | ISA's MSDE database is secured from network access by default. Configuration changes are required to import ISA MSDE log information into a WebSpy application running on a remote workstation. Click here to download the white paper. |

Please note: WebSpy products import information from log files produced by your gateway, proxy or firewall product. Some of the above products require a third party product such as a syslog daemon to produce these log files. Please check your product's documentation with regards to its logging abilities and requirements. There may be some log file versions or formats created by the above logging devices that are not supported. If you have trouble importing your log files, please contact [WebSpy Support](#).
