HFNetChkPro AdminSuite manages the two most important security risks on your network, missing patches and passwords.

HFNetChkPro AdminSuite is the full version of HFNetChkPro bundled with Shavlik's account security audit tool - AccountInspector. This easy-to-use tool helps you ensure the enterprise account security of your workstations and servers. When combined AccountInspector and HFNetChkPro enable you to easily manage the two major security problems found today, missing security patches and weak account security.

Weak account security is the most common way computer security is breached. By using tools like AccountInspector you can work to correct this problem on your networks, quickly and easily. Shavlik AccountInspector also allows you to interactively disable suspicious accounts, re-set passwords and clear locked accounts making it much easier to find and fix security problems on your network. AccountInspector is only available in the AdminSuite.

Also included in the AdminSuite is Shavlik's Password Inspector which can scan your network for weak passwords and receive advice along with being able to set strong passwords on local and remote systems. Use the interactive Password Wizard to create strong passwords on all your computers from one convenient location to focus strictly on passwords.

Shavlik AccountInspector Benefits

- Check for locked out accounts, a sign of attack.
- Inspect and set strong passwords, a key to security.
- Disable suspicious accounts as soon as you find them.
- IP range, domain and computer name based scanning.
- Search out unauthorized Administration Accounts, a common problem.
- Seek out passwords that are over 30 days old and in need of change.
- Export reports to Microsoft Excel.
- Find dormant accounts that are over 30 days old that should be disabled.
- User settable thresholds allow for custom searches.
